

Software Engineer

Location: [Remote / Hybrid / On-Site]

Department: Engineering

Employment Type: Full-Time

About the Role

We are seeking a **Software Engineer** to design, build, and maintain scalable applications. You will collaborate with cross-functional teams across the full development lifecycle—from architecture and code review to automated testing and production deployment.

Key Responsibilities

- Design, develop, and maintain clean, testable, and efficient code across backend and/or frontend systems.
- Build, document, and consume RESTful or GraphQL APIs and integrate third-party services.
- Optimize systems for maximum speed, scalability, and uptime.
- Participate in sprint planning, code reviews, and architectural discussions.
- Identify bottlenecks, triage bugs, and resolve production incidents.

Qualifications

- Bachelor's degree in Computer Science, related field, or equivalent practical experience.
- 2-4 years of production software development experience.
- Proficiency in one or more core languages (e.g., Python, TypeScript, Go, Java, or C#).
- Hands-on experience with modern web frameworks and relational/NoSQL databases (PostgreSQL, MySQL, MongoDB).
- Familiarity with Git, CI/CD pipelines, Docker, and cloud platforms (AWS, GCP, or Azure).
- Solid understanding of data structures, algorithms, and system design principles.

What We Offer

- Competitive salary: [Insert Compensation Range]
- Comprehensive health and insurance benefits
- Flexible work arrangements and paid time off (PTO)
- Learning and home-office equipment stipends
